SUMMARY

Senior DevOps Engineer with nearly 10 years across cloud-native infrastructure, low-level Linux, and CI/CD. Currently at Sidero Labs, contributing to **Talos Linux**. Long-time remote engineer on globally distributed teams.

EXPERIENCE

Sidero Labs — Remote — Oct 2021 – Present
Senior DevOps Engineer (Jan 2026 – Present) · DevOps Engineer (Oct 2021 – Jan 2026)

- Own OS lifecycle for **Talos Linux** (immutable Kubernetes OS) — kernel and package builds, dependency / CVE management, release pipelines.
- Work across the boot stack — UEFI, **secure boot / trusted boot**, disk encryption (LUKS), system services, and the Linux kernel.
- Design and maintain CI/CD and codegen tooling for the OS and surrounding Kubernetes components.
- Maintain ARM single-board computer support — Raspberry Pi, NVIDIA Jetson, Rockchip, Allwinner — including U-Boot, device trees, and overlays.
- Enable NVIDIA GPU workloads via system extensions; debug failures end-to-end across kernel, containerd, kubelet, and the Kubernetes control plane.

VivSoft — Remote — Jan 2021 – Oct 2021
Senior DevSecOps Engineer

- Built a Kubernetes-based platform on **Platform One BigBang** for regulated, hardened (DoD-style) environments.
- Deployed **Istio** service mesh, including a secure multi-tenant Kubeflow setup with sidecar injection.
- Standardized application delivery using **GitOps** workflows.

Hitachi Vantara — Pune, India — Oct 2019 – Dec 2020
Senior Cloud Engineer

- Built Kubernetes-based CI/CD pipelines and security workflows for the company's cloud and data platform products.
- Automated container image build, test, and **vulnerability scanning**; established image security and quality standards.
- Implemented Kubernetes resource and compliance validation using **Inspec**.
- Migrated legacy applications onto Kubernetes; ran containers-in-containers via **runc / crun** for sandboxed builds.

REAN Cloud — Pune, India — Oct 2016 – Oct 2019
Senior Cloud Engineer

- Built CI/CD systems for cloud infrastructure and application delivery used across customer engagements.
- Developed VM and container image pipelines using **Packer** with integrated build, test, and security-scan stages.
- Automated compliance hardening with Chef and Inspec, including **DISA STIG** validation for Linux operating systems and containers.
- Containerized the internal accelerator platform onto Docker Swarm; contributed upstream to **Terraform** and **Inspec**.

OPEN SOURCE & PROJECTS

- **IRSA Anywhere** — OIDC-based IAM Roles for Service Accounts for Kubernetes clusters outside AWS.
- **GCP Workload Identity Federation Demo** — Keyless authentication for Kubernetes workloads against Google Cloud.
- Active OSS contributor; further personal tooling at github.com/frezbo.

SKILLS

- **Systems & Containers:** Linux, Talos, Kubernetes, containerd, Docker, runc, crun, secure boot, systemd
- **Cloud & IaC:** AWS, GCP, Azure, Terraform, Pulumi, Crossplane
- **CI/CD & GitOps:** GitHub Actions, Jenkins, Helm, Argo CD, Flux
- **Security & Identity:** OIDC, IAM, IRSA, Workload Identity Federation, Inspec, Trivy
- **Languages:** Go, Python, Bash, Ruby

CERTIFICATIONS (PREVIOUSLY HELD)

- **Certified Kubernetes Administrator (CKA)** — CNCF / Linux Foundation
- **Certified Kubernetes Security Specialist (CKS)** — CNCF / Linux Foundation
- **Certified Kubernetes Application Developer (CKAD)** — CNCF / Linux Foundation

EDUCATION & LANGUAGES

College of Engineering, Kidangoor — B.Tech, Electronics and Communication Engineering (incomplete) 2012 – 2016

Languages: English (Professional), Malayalam (Native)
